Part I Resource Allocation

1 Power Control for Wireless Networks: Conventional and QoS-Flexible Approaches 3
F. de S. Chaves, F. R. P. Cavalcanti, R. A. de Oliveira Neto, and R. B. Santos
1.1 Introduction 3
1.2 Models and Basic Definitions 4
1.3 Centralized Power Control 8
1.4 Distributed Power Control 11
1.5 Feasibility and Convergence Aspects of Distributed Power Control 15
1.6 Power Control for QoS-Flexible Services 18
1.7 Power Control Games 23
1.8 Prediction of Channel State Information 41
1.9 Conclusions and Topics for Future Research 46
References 46

2 RRM Performance for GSM/EDGE Radio Acess Network 51
Y. C. B. Silva, T. F. Maciel, and F. R. P. Cavalcanti
2.1 Introduction 51
2.2 Fundamentals of RRM in GSM/EDGE 52
2.3 Advanced Radio Resource Management for GSM/EDGE 58
2.4 Simulation and Modeling of GSM/EDGE Networks 65
2.5 RRM Performance in GSM/EDGE 71
2.6 Conclusions and Research Directions 91
References 92

3 Performance Optimization in Practical HSPA Networks for Wireless Broadband Access 95
M. I. J. Da Silva
3.1 Introduction to Broadband Wireless Access 95
3.2 System Overview 96
3.3 HSDPA Performance 112

3.4 HSDPA Field Trials: Mobility Issues 118
3.5 HSUPA Results: Field Trials 119
3.6 Applications Performance over HSPA 120
3.7 Capacity Planning 134
3.8 Conclusion and Research Directions 139
References 139

4 Congestion Control for Wireless Cellular Systems with Applications to UMTS 141
E. B. Rodrigues, F. R. P. Cavalcanti, and S. Wänstedt
4.1 Introduction 141
4.2 Congestion Control and QoS Management 142
4.3 Congestion Control Framework and Radio Resource Management 145
4.4 Resource-Based and QoS-Based Congestion Control 148
4.5 Resource-Based Framework for Circuit-Switched Networks 151
4.6 Case Study: WCDMA Performance with Circuit-Switched Voice 158
4.7 QoS-Based Framework for Packet-Switched Networks 165
4.8 Case Study: HSDPA Performance with VoIP and WWW Services 174
4.9 Conclusions and Research Directions 180
References 182

5 Resource Allocation in Multiuser Multicarrier Wireless Systems with Applications to LTE 187
W. Freitas Jr., F. R. M. Lima, R. B. Santos, and F. R. P. Cavalcanti
5.1 Introduction 187
5.2 Scenarios for Radio Resource Allocation 189
5.3 Radio Resource Allocation Fundamental Problems 193
5.4 Optimization Problems in Multicarrier Resource Allocation 196
5.5 Optimization Tools for Multicarrier Resource Allocation Problems 199
5.6 Algorithms for Frequency Resource Assignment 208
5.7 Subcarrier Assignment in 3GPP's Long-Term Evolution (LTE) . . . 214
5.8 Power Allocation Algorithms and Performance in OFDMA 221
5.9 Conclusions and Research Directions 228
References 229

6 Common RRM for Multiaccess Wireless Networks 233
A. P. da Silva, L. S. Cardoso, V. A. de Sousa Jr., and F. R. P. Cavalcanti
6.1 Introduction 233
6.2 Multiaccess Networks 234
6.3 Common Radio Resource Management 236
6.4 Performance of Access Selection 243
6.5 Access Selection Solutions Performance in Practical Scenarios . . . 249
6.6 Performance of Access Selection and Vertical Handover 254

6.7 Case Study: Access Selection in an UTRAN and WLAN 257
6.8 Conclusions and Research Directions 261
References 263

Part II Transceiver Architectures

7 Strategies for Link-Level Performance Assessment in the Simulation of Wireless Systems 269
E. M. G. Stancanelli, C. H. M. de Lima, and D. C. Moreira
7.1 Introduction 269
7.2 Rationale for Link-Level Performance Evaluation 270
7.3 Link-Level Modeling 272
7.4 Link-Level Software Development Framework 281
7.5 Design of Link-to-System Interfaces 291
7.6 Conclusions and Research Directions 306
References 307

8 Channel Equalization Techniques for Wireless Communications Systems 311
C. M. Panazio, A. O. Neves, R. R. Lopes, and J. M. T. Romano
8.1 Introduction and Motivation 311
8.2 Channel Modeling 313
8.3 Equalization Criteria and Adaptive Algorithms 314
8.4 Improving Equalization Performance Over Time Dispersive Channels 324
8.5 Equalization with Multiple Antennas 328
8.6 Turbo-equalization: Near Optimal Performance in Coded Systems 336
8.7 Conclusions 350
References 351

9 Channel Estimation for OFDM Systems: Techniques, Algorithms, and Performance 353
R. F. Vigelis, D. C. Moreira, and C. C. Cavalcante
9.1 Introduction 353
9.2 OFDM Fundamentals 353
9.3 Channel Estimation for Time-Varying Channels 365
9.4 Recursive Methods 376
9.5 Channel Estimation for MIMO-OFDM Wireless Systems 381
9.6 Conclusions and Research Directions 387
Appendix 1 388
Appendix 2 389
References 391

10 Link Adaptation for MIMO-OFDM Systems 393
D. C. Moreira, W. C. Freitas Jr., C. A. de Araújo, and C. C. Cavalcante
10.1 Introduction 393
10.2 Fundamentals of MIMO Transceiver Architectures 394
10.3 Advanced MIMO Transceiver Architectures 403
10.4 Link Adaptation in Multiple Signal Dimensions 410
10.5 Summary 416
References 417

11 Multiuser MIMO Systems Using STFMA PARAFAC Tensor Modeling 421
A. L. F. de Almeida, G. Favier, and J. C. M. Mota
11.1 Introduction 421
11.2 Tensor Decompositions: A New Signal Processing Tool 424
11.3 Background on the PARAFAC Tensor Decomposition 425
11.4 Space–Time–Frequency Multiple-Access MIMO System 428
11.5 STFMA Performance with Perfect Channel Knowledge 439
11.6 PARAFAC Tensor Modeling for the STFMA System 444
11.7 Blind Detection 446
11.8 Simulation Results with Blind Detection 452
11.9 Conclusions and Research Directions 456
References 457

12 MIMO Transceiver Design for Enhanced Performance Under Limited Feedback 463
Í. L. J. da Silva, A. L. F. de Almeida, F. R. P. Cavalcanti, and G. Favier
12.1 Introduction 463
12.2 Background on Limited Feedback-Based MIMO Systems 465
12.3 Channel-Adaptive Limited Feedback Beamforming Techniques . . 472
12.4 Linear Precoding for Spatial Multiplexing Systems 482
12.5 Linear Precoding for Space–Time-Coded Systems 491
12.6 Tensor-Based Space–Time Precoding (TSTP) 493
12.7 Conclusions and Research Directions 504
References 505
