1	Integrated urban water management in the humid tropics	1
1.1	Concepts	1
1.2	Urban development in the humid tropics	2
1.3	Climatic conditions in the tropics	4
1.4	Water supply and sanitation	6
1.5	Stormwater and floodplains	7
1.6	Total solids	10
1.7	Water quality	10
1.8	Water-related diseases	11
1.9	Urban water – an overview of the main issues	12
1.10	Integrated urban water management	15
2	Water supply and wastewater management in the humid tropics	25
2.1	Overview	25
2.2	Water supply interactions in the humid tropics	25
2.3	Wastewater collection, treatment and reuse	35
2.4	Industrial wastewater collection, treatment and reuse	43
2.5	Concluding remarks	44
3	Stormwater management in the humid tropics	49
3.1	Urbanization and hydrology in the humid tropics	49
3.2	Climatic factors in the humid tropics	50
3.3	Socioeconomic and institutional aspects	51
3.4	Urban drainage structural control measures	52
3.5	Urban drainage and urban master planning	59
3.6	Conclusions	65
4	Interactions between solid waste management and urban stormwater drainage	69
4.1	Introduction	69

4.2	Origins and characteristics of solids	71
4.3	Urban sediments	76
4.4	Impacts of solids on operational performance	77
4.5	Solids management	80
4.6	Institutional framework for solid waste management	84
5	Control of public health hazards in the humid tropics	89
5.1	Introduction	89
5.2	Health risks associated with microbiological and chemical pollutants	90
5.3	Transmission pathways in urban water systems	93
5.4	Strategies for protecting urban water systems from contamination	98
5.5	Monitoring the health benefits of urban water systems	102
6	Reducing vulnerability to water-related disasters in urban areas of the humid tropics	109
6.1	Introduction	109
6.2	Storms, floods and cyclones	114
6.3	Water shortage and droughts	114
6.4	Landslides and mudslides	116
6.5	Tsunamis	117
6.6	Human-related hazards	117
6.7	Early warning and preparedness	118
6.8	Human resources	121
6.9	Cases of risk assessment and management	121
6.10	Conclusions	124
7	Integrated urban water management: institutional, legal and socioeconomic issues	129
7.1	Basis for the formulation of urban water management policies	129
7.2	Environmental and water resource management in the urban environment	132
7.3	Urban water management in the humid tropics: a new paradigm	139
7.4	Concluding remarks	141
8	Education and capacity-building	143
8.1	Introduction	143
8.2	Formal education	145
8.3	Other training needs	146
8.4	Information and data requirements	147
8.5	Capacity-building initiatives	150
8.6	Training centres and institutional support	152
8.7	Conclusions	153
