Introduction <i>Emanuela Arezzo and Gustavo Ghidini</i>	1
PART I GENERAL THEMES IN PATENT LAW	
1 Tailoring patents to different industries <i>Dan L. Burk and Mark A. Lemley</i>	9
2 Innovation in the new technological industries: looking for a consistent cooperative model <i>Valeria Falce</i>	40
3 The future of the requirement for an invention: inherent patentability as a pre- and post-patent determinant <i>Justine Pila</i>	55
4 The experimental use of the patented invention: a free use or an infringing use? <i>Vincenzo Di Cataldo</i>	91
5 Patents and competition law: some features of the new interface <i>Steven D. Anderman</i>	105
PART II EMERGING THEMES IN INFORMATION TECHNOLOGIES	
6 Are software patents something special? <i>Reinier B. Bakels</i>	131
7 Towards a new instrument of protection for software in the EU? Learning the lessons from the harmonization failure of software patentability <i>Reto M. Hilty and Christophe Geiger</i>	153
8 Patent governance in the United States: lessons from <i>Bilski v. Kappos</i> <i>John R. Thomas</i>	193

PART III EMERGING THEMES IN THE BIOTECH INDUSTRIES

- 9 A decade after the birth of the biotech directive: was it worth the trouble? 221
Sven J.R. Bostyn
- 10 Gene patents under fire: weighing the costs and benefits 260
Christopher M. Holman
- 11 Patentability of human stem cell or synthetic biology based inventions 288
Paul L.C. Torremans
- 12 Moral limits to biotech patents in Europe: a quest for higher harmonization 309
Andrea Ottolia
